Date: 16.02.2018 06:23

I had 10 pieces in stock, who still one or two
needs, report!

The goal!!

Jumper to put 3.3v into both backlites

Jump to connect Backlite to 3.3v

Cathode

Anode

0v

3.3v – diode pulls 2.8v

I2C Data

I2C Clock

Reset

Pinout of the 11 pin GLCD Molex connector

- 1 Vlcd in 'connect 1 to 2. Then via cap to 0V
| ---- 1uf -->0v
- 2 Vlcd out
- 3 ---- 'connect 3 to 4 via the cap
|
100nF
- 4 ----
- 5 ---- 'connect 5 to 6 via the cap
|
100nF
- 6 ----
- 7 GND
- 8 Vcc 2.4
- 9 SDA (I2C)
- 10 SCL (I2C)
- 11 RESET 'Pull high to operate

Jumper to put 3.3v into both backlites can be connect to MCU, and/or MCU PWM

MCU Connection
Reset
I2C Clock
I2C Data
3.3v
0v

2 x 104 CAPs
across
Pins 3 & 4
Pins 5 & 6

Pins 1 & 2 – connected together

11 way to PCB

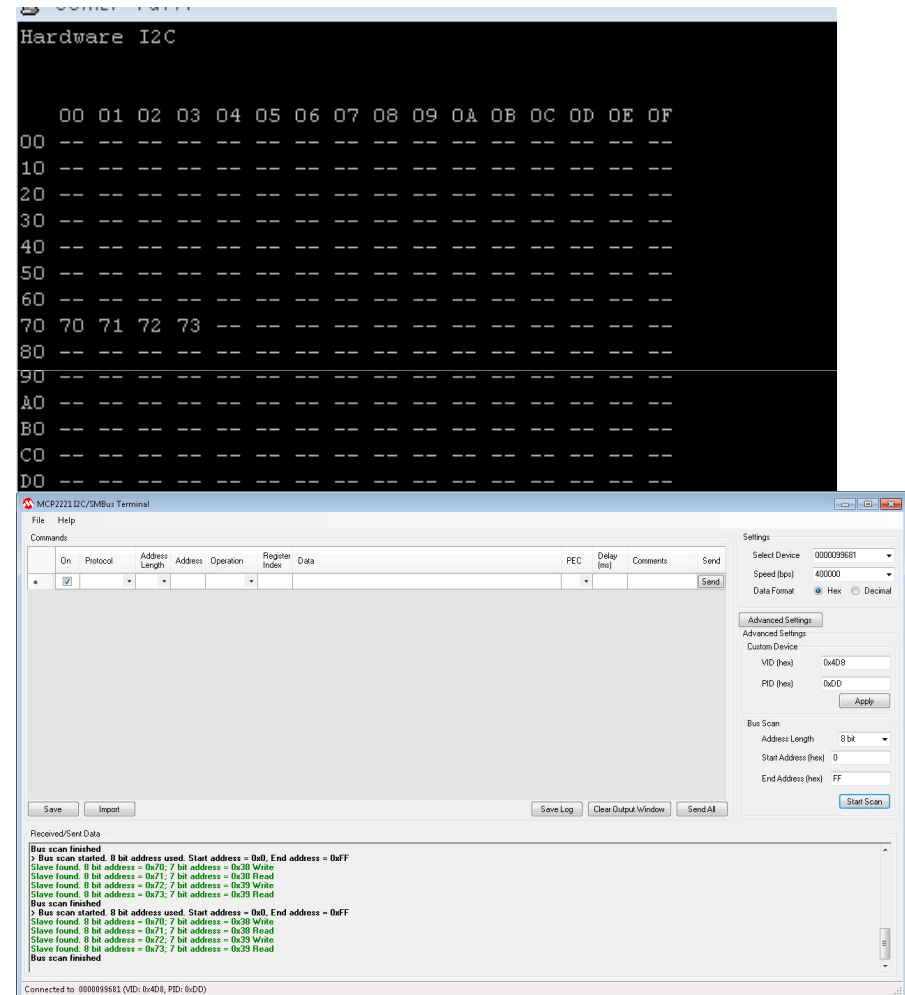

11 way MOLEX

I2C discovery report more than one interface.

- GCB I2C discovers
 - 0x70..0x73
- So, check this finding
- MCP2221 also discovers
 - 0x70..0x73

Odd... this was not reported on the web site

When RESET is low...

- The I2C interface is not operation
- Need to connect RESET to High or select HIGH on a MCU port

Need to have RESET line high for I2C discovery to work

In use

Great Cow BASIC 16F18446
Anobium 2019 I2C GLCD UC1601
